DS-30

DS-40

DS Range

Record, listen, learn, relax…

The stunning Olympus DS-30, DS-40 and DS-50 take superior audio recording and playback to new levels of quality, simplicity and versatility.

Housed in a sleek, stylish full-metal-jacket design, they're ideal for business people on the move, meetings and conferences, interviews and lectures, court reporting, or just relaxing with great tunes or a good audio book.

Choose from five mono or stereo recording modes: from LP, for maximum space, to extra-quality stereo (XSHQ) for the clearest, crispest, high-quality recordings. With ample memory and impressive battery life available (up to 275 hours*), you can capture and listen for longer.

More than just high-quality recording

In addition to recording and playing WMA files, the DS range enables you to listen to MP3 and AA (Audible content) files. You can download and play back music, podcasts of favourite shows, online lectures, audio books and more, transferring files quickly to and from PCs via a high-speed USB 2.0 cable.

All features are easy to navigate via a large, white, backlit display, intuitive menu system and prominent, precision buttons, plus optional voice guidance. Five folders are available to store your recordings and each folder can fit up to a maximum of 200 messages. Alarm playback and timer recording is also available on the DS models.

* On Olympus DS-50 models.

DS-50

DSS Player V7.0 Software

The latest release of the Olympus DSS Player Software is the perfect way to download and organise voice recordings and other audio files on a PC. Now supporting podcasts for the first time, it even enables menu settings to be transferred across from the computer to the voice recorder itself.

An upgrade to DSS Player Plus offers users the opportunity to integrate voice-recognition software (if installed) and is available online. For compatibility details or to download a copy, please visit www.olympus-europa.com/voice
