Plantronics Headsets
.Audio™ PC & Gaming Range
Spring/Summer 07

There is a headset for everyone in the .Audio range – with subtle variations in form and function that are typical of Plantronics’ attention to detail and focus on customer needs.

So you want to listen to music, but still take phone calls when they come through? We offer great headsets with superior call clarity, that also work with Voice over Internet, your land-line or even your mobile phone.

You want the freedom to get up and walk round while you talk and listen? Plantronics can help – our wireless *Bluetooth*[®] headsets give you great sound quality and range, as well as plug and play simplicity.

Do you listen to music, or games-play for long periods at a time? No-one makes a more comfortable headset than Plantronics.

Do you need both hands for the keyboard or controller, while talking and listening?

Wired, or wireless, the Plantronics .Audio range meets the needs of today’s most demanding consumers.

Great technology makes

Find out about our technologies and identify

Bluetooth®

Bluetooth® wireless technology is a short-range communications technology intended to replace the cables connecting portable and/or fixed devices while maintaining high levels of security.

The key features of *Bluetooth®* technology are robustness, low power, and low cost.

Digital Signal Processing (DSP technology)

Digital Signal Processing is a sound treatment technology which delivers up to 35% reduction in background noise, whilst maintaining crisp, clear voice transmission.

If you are planning to use your .Audio headset for chatting over the Internet, or for games which rely on voice recognition, it is well worth looking for a DSP model – especially so, if you live in a lively household where there is a lot of background noise.

Noise-cancelling microphones

Plantronics' noise-cancelling microphones reduce the background noise and so enhance the accuracy of the sounds being transmitted.

They are ideal for noisy environments.

WindSmart®

Plantronics' patent-pending WindSmart technology uses a specially designed material over the microphone to diffuse wind noise, so that even in windy environments – such as the car or the street – users can enjoy crisp, clear conversations.

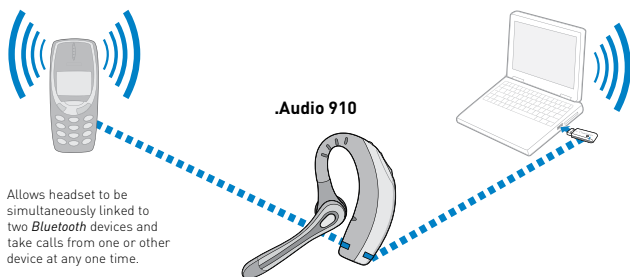

for great sound what suits your needs

Multipoint

Most *Bluetooth*® devices are point-to-point, which means they can only be connected to one device at a time – for example a *Bluetooth*® headset can be connected to a mobile phone, but then can't be used with another device until disconnected from that mobile. Or a PDA device might be connected via *Bluetooth*® with a computer, but

then can't also connect to a *Bluetooth*® keyboard.

When a headset has multipoint capability it can receive information from more than one device at the same time. Use the multipoint-equipped .Audio 910 headset to answer calls from either your mobile phone or PC Softphone.

Allows headset to be simultaneously linked to two *Bluetooth* devices and take calls from one or other device at any one time.
