

Rexel Bindings

Comb Binding

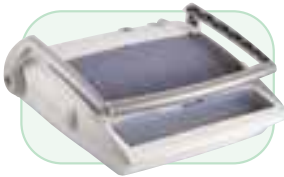

Of the many binding systems available, comb binding is by far the most popular. Quick and simple, comb binding suits a wide variety of user needs. It also offers total flexibility, you can bind the smallest document or a 450 page report with ease.

Comb binding is also a very practical binding method. Comb bound documents open out completely flat so they are ideal for presentations and easy to photocopy. The pages are completely secure yet easy to update, as sheets can be added or deleted when required.

Rexel comb binders make life even easier for you. They punch many more pages than other systems, yet require less effort. Documents can be bound much more quickly too, because of the unique, separate comb opening mechanism. The robust, all metal chassis and mechanism means you can use a Rexel comb binder day after day with superb results every time.

Rexel offers a comb binding system to meet every binding requirement, from a compact budget machine to the convenience of electric punch models. All will create professional documents in a matter of minutes.

Wire Binding

Wire binding produces professional documents that not only look good but are also very easy to use. Wire bound documents are completely secure yet the pages open easily, can be laid flat or even turned through 360° for easy reference and photocopying. Wire bound documents are smart yet business-like, just the right image for any organisation.

The Rexel range of wire binding systems is highly innovative, combining stylish good looks with exceptional performance. Incorporating the latest wire binding technology, these superb machines are the result of an extensive programme of market research, design and development.

Rexel is the leading brand for advanced binding systems and the wire binding range reflects Rexel's renowned expertise. All Rexel wire binding machines use the international standard 3:1" 34 holes punch pattern so that whatever the binding requirement, Rexel can offer a wire binder to suit. There's also a wide range of complementary binding mechanisms and covers to create individual, easy to use documents.

Thermal Binding

Thermal binding is ideal for all kinds of documents, from instruction manuals to staff directories. It provides permanent protection for all your important reference material and the finished result is extremely smart. Thermal bound documents are neat and flat, making them easy to store or carry around.

Thermal binding is the ideal binding method when time is limited as it requires no initial preparation. Simply place the loose pages of your document into a thermal cover, wait a few seconds for the binding machine to reach temperature, then place your document inside. Within seconds you'll have a smart, permanently bound document.

Rexel thermal binders produce highly professional results with a minimum of effort. It sits neatly on a desktop, ready for use at any time. Using a Rexel thermal binder, you can also bind several documents at the same time, which makes the process even faster and more economical.

Rexel Binding Range

Business communications are becoming increasingly sophisticated, and many offices now have access to desktop publishing systems, laser printers and colour copiers. As a result, companies are producing their own sales material and documentation to an exceptionally high standard. However, any printed material will look more professional and have greater impact if it is presented as a properly bound document.

How to choose your comb binder...

Rexel have a range of machines and supplies to ensure professionally bound documents can be produced quickly and easily in the home, school or office. Choose from smaller machines punching up to 5 sheets designed for personal use, to larger electric punching models punching up to 30 sheets. The range features a selection of user friendly features to make comb binding as easy as possible.

"Flowline" concept

The larger machines use *Flowline Concept* to ensure a faster binding process. Flowline is the logical ergonomic process of producing a document – starting at the rear of the machine and completing the bound document at the front. The Flowline range of machines include some other specific features:

"Lowline" concept

Rexel use a patented comb clamp system to support the plastic comb when binding a document. This mechanism, provides a low and smooth design, efficiently clamping a comb in position.

"Simplyclick" system

A single or dual knob drives the comb opening mechanism. The mechanism is sprung to assist binding particularly large documents. Simply-click enables finger tip control during the opening and closure process.

TIP System

To help minimise the forces required punching numbers of sheets in document production. TIP system uses individual punches manufactured to the highest tolerances to produce a punch profile that helps maximise efficiency and reduce punching force.

Comb Binding 1

CB105 Compact Comb Binder

CB105

- An easy to operate comb binder designed for use in the home and office
- Easy punch action for up to 5 sheets (80gsm) in a single action
- Binds up to 90 sheet documents using 5mm to 12.5mm plastic combs
- Designed to operate with A4 and US letter format pages
- Rotary comb opening for control and convenience
- Integral carry handle and security feature
- Starter kit included

CB206 Compact Comb Binder

CB206

- A compact desktop comb binder
- Suitable for the small office, at home or personal use.
- Designed for A4 and US letter documents
- Ideal for all popular comb binding applications.
- Highly durable, robust construction.
- 10 sheet punch capacity
- Binds up to 140 pages using all sizes of comb from 5 to 16mm
- Adjustable edge guide
- Rotary comb opening
- Independent punching and comb opening functions for faster binding
- Includes security slot, carry handle and vertical parking option
- Starter kit included

Binds up to 140 pages

CB255

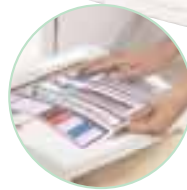

A highly portable compact machine designed for the home and office.

- Punches up to 15 sheets at a time
- Binds documents up to 175 sheets
- Uses plastic combs up to 20mm
- Easy to grip carry handle
- Removable punch handle is stored neatly in the base
- Adjustable edge guide for accurate edge alignment
- Starter kit included

CB255 Portable Comb binder

Punch handle stored in base

Easy action

Portable units

CB305

Full sized office model, featuring the 'Flowline' concept at a practical price for the home and small office.

- Punches up to 15 sheets each time
- Binds A4 documents up to 175 pages
- Uses plastic comb sizes from 4,5mm to 20mm
- Precision edge guide adjusts to ensure accurate alignment
- Document measure to determine which comb size to use
- Storage tray keeps plastic binding combs ready for use
- Patented 'Lowline' comb grip system for greater safety
- Plastic combs are opened with the 'simplyclick' system
- High capacity waste container requires emptying less frequently
- May be stored vertically to save space
- Includes starter kit
