PHILIPS

Highlights

Free-floating studio-quality microphone

The free-floating microphone is decoupled from the device's housing, which guarantees that almost no background, touch, click, air or structure-borne noise is recorded. This technique is derived from studio microphones to make sure there are no sound distortions whatsoever and to guarantee outstanding speech recognition results.

Integrated barcode scanner

The SpeechMike Premium Touch is also available with an integrated barcode scanner to link client or patient data to a recorded file simply by scanning a barcode. The scanned information is automatically attached to the dictation file, streamlining the documentation process. All identifying information is entered accurately, increasing security and potential for cost savings.

Freely configurable keys

The SpeechMike Premium Touch has freely configurable keys which are especially useful for programming speech recognition commands. The device can be personalized for any user and application.

How it works:

Buy a Philips SpeechMike
