Laminators

2007/2008

Here Today, Here Tomorrow.

Swordfish lamination enhances presentations and prolongs the lifespan of any document, whether it's to rescue a favourite recipe card, or an important client presentation to take in to work the next day. Laminate your cherished photographs to avoid fading from sunlight and mucky fingers - making memories last longer.

All Swordfish laminators operate with adjustable temperature, which allows the correct amount of heat to be set for a specific pouch thickness. An easy solution to safely protect your documents for use - time and time again.
